

Subject: Quality and environment policy

Management of EKOFITR spol. s r.o, announces this Quality and Environment Policy:

A. Area of increasing the quality of offered services and customer satisfaction

The company strives to achieve better product quality than our competitors. Product quality is conditioned by quality equipment, qualified staff, qualified suppliers and a functioning company management system.

In the area of offered products we will follow the following principles:

- our customers are at the center of our interest,
- the products must be handed over to the customer in the ordered design and within the agreed deadline,
- the products must be so made as to serve their full purpose while maintaining all safety, health and hygiene conditions,
- we strive for the best possible partnerships with our domestic and foreign suppliers,
- the production technologies, technical equipment and staff qualifications used must be constantly improved in line with increasing product demands,
- The use of modern methods of promotion is a prerequisite for the further development of society.

B. Area of environmentally friendly approach, environment

We are aware that the image of our company is formed not only through products, but also by behavior towards our surroundings and approach to the environment.

We will follow the following principles in the implementation of products and operation of the company:

- comply with legal requirements and other binding obligations,
- reduce the burden on the environment by using reliable production processes,
- implement cost-effective measures in the areas of raw material and energy consumption, waste generation and recovery, and protection against environmental pollution,
- not to use chemical elements in the production, the possible leakage of which would endanger the environment and thus prevent the emission of greenhouse gases in their activities,
- motivate workers to protect the environment,
- ensure maximum use of production waste for recycling,
- use upward rates of energy from renewable sources,
- be environmentally transparent to the public.

In order to comply with the Quality and Environment Policy, the company's management is committed to continuous improvement of the management system and compliance with all related requirements. Monitoring of the condition is ongoing, the evaluation is performed once a year in connection with the implementation of ISO 14001 audits.
